

MUNICIPAL PLANNING

Alcona South Secondary Plan: Master Drainage Plan

Secondary Plan and Master Drainage Plan

Clients and Location: Lefroy Belle-Ewart Management Inc.; Town of Innisfil

GREENLAND was retained to prepare a Master Drainage Plan (MDP) for the Lefroy Belle Ewart (LBE) Secondary Plan in a manner which harmonizes the community's need for housing, industry and services with the need for sustaining a healthy ecosystem.

The Secondary Plan and the MDP provide the required background information for the Town and the Lake Simcoe Region Conservation Authority to proceed with implementation.

The MDP will provide guidance to local and regional authorities in planning stormwater management for existing and future land use development while ensuring the protection, restoration and enhancement of natural features. The MDP will also be useful for the review and regulation of stormwater management issues related to individual development proposals.

The project identified water quality issues and opportunities for enhancement through target setting; developed predictive tools for evaluating best management practices; determined total maximum daily loads for healthy watercourses; and developed a water quality management plan to be used in implementing sustainable development.
