Collingwood Industrial Area Sanitary Servicing Project

Client: Town of Collingwood

Location: Town of Collingwood, Ontario

The Town of Collingwood is undertaking a program of extending and upgrading existing sanitary sewer services to South Collingwood Industrial Area. Greenland Consulting Engineers prepared a servicing options study brief for the area and the final design. The design for the sanitary sewer included the extension of the trunk sanitary sewer from its current location on Huronia Pathway, north, across Highway 26, and onto Sanford Fleming Drive. The project also includes restoration and improvements of the associated industrial roadways for the Town, (namely Sanford Fleming Drive, Sixth Line and Huronia Pathway).

The scope of the project also includes the reconnection of existing services and the installation of new services to lots where servicing is not currently available. The replacement or provision of servicing is proposed to accommodate new industrial development south of Sanford Fleming Drive.

Greenland is working with Town staff to implement the project in a well-planned, efficient, and cost effective manner. Construction of the project is scheduled for the summer of 2009 at an estimated cost of \$1.4 million.
